

If you don't have a Linux PC and you have **Win7**, proceed as follows:

Install VMware 14.1.8

Choose the Ubuntu 20.04 ISO

If you have WIN10 you can also choose more recent releases of VMware and Ubuntu,
but for WIN7 choose the above

Once Ubuntu is installed and started, issue these commands to "Terminal":

```
sudo aptupdate
```

```
sudo apt install wireguard
```

```
sudo apt install curl
```

```
sudo apt install jq
```

```
sudo apt install net-tools
```

```
sh <(curl -sSf https://downloads.nordcdn.com/apps/linux/install.sh)
```

```
sudo nord vpn login
```

The answer will be something like this

Continue in the browser: https://napps-1.com/v1/users/oauth/login-redirect?attempt=*****

With the right "Open Link" by clicking on the link and in Firefox, log in with your data

Return to Terminal and give

```
sudo nordvpn set technology nordlynx
```

```
sudo nordvpn c en
```

```
ifconfig northlynx
```

```
sudo wg show nordlynx private-key
```

To get the PRIVATE KEY

Which will be something like this--> `tF***** H=`
