

Guide how to install Flash Expander on Zgemma H9 Series.

This is particularly useful in the Zgemma H9 series (H9S, H9T, H9.2S & H9.2H) due to the 256MB flash, installing Flash expander will allow the installation of both Kodi and QT Stalker and many other plugins. **NOTE H9S AND H9T MUST USE WHITE USB 2.0 PORT.**

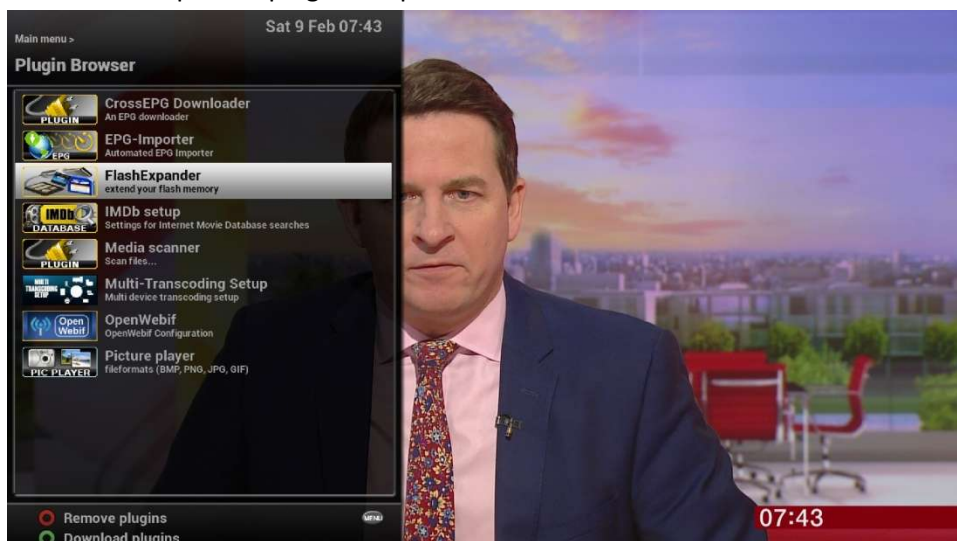

This guide is written for OpenViX, but should be same process should be fine for other Enigma 2 image builds.

For the purpose of this guide we're using a 8GB USB stick for Flash Expander.

- 1) Power off the device and insert your USB stick.
- 2) Power on the device.
- 3) Once booted initialise the USB stick. Menu > Setup > Storage > Initialize Devices > Select your USB disk > Press OK > Press Green to initialise.
- 4) Now install Flash Expander via the online plugin feeds. Press Menu > Plugins > Press Green to download > Select Extensions and press OK > Select Flashepaner and press OK to install.

- 5) Once install and your back to the plugin browser main menu press Exit button.
- 6) Select Flash Expander plugin and press OK.

- 7) You will then get a window saying 'FlashExpander is not install, create? Press Key OK.'

- 8) Now you will be prompted to select your USB disk, press OK.

- 9) Select Yes to install to your USB disk.

10) Now wait for the process to complete.

11) When complete you will be prompted to reboot your box.

12) Select Yes to reboot, the first reboot will take a few seconds longer, be patient and the box will boot.

13) Once booted go to Menu > Information > Devices. If successful your USB stick will show now as /usr. We also have a 16GB SD card installed for the odd recording, picons, EPG DATA etc.. A large SD card could be used for recordings.

14) Now you can go on and install many plugins including BOTH Kodi and QT Stalker.
